

DESIGN ENGINEER

JOB REF: 0566

Our client is a successful manufacturer that designs, manufactures and supplies solutions to the power, telecom and rail industries. Due to continued growth the company now wish to appoint a Design Engineer. This is a great opportunity to join a rapidly expanding company that is currently heavily investing in the business and its people.

Job Purpose

The Design Engineer will have experience working on 2D and 3D design packages to modify design based on client queries. The company uses Autodesk Inventor and AutoCAD so experience in either or both packages is ideally required, particularly in relation to sheet metal fabrication. Experience in using other design packages will also be taken into consideration. You will also be required to program CNC cutting machines using Radan Radpunch software, so experience in this type of work is desirable.

The Design Engineer will ideally be from a mechanical design background. You will work on customer design queries and producing technical drawings in response. You should be willing to work as part of a team, but also be able to manage their own projects from concept to completion. Organisation of site installation works will be required from time to time.

Responsibilities:

- Ensure correct drawings are produced in accordance with relevant design standards.
- Working with 2D AutoCAD and 3D Inventor software for product research and development.
- Program CNC cutting machinery using Radan software.
- Meeting client expectations by ensuring prompt reply to queries.
- Able to work in a fast pace environment.

Person Specification

- Achieved a third level qualification in an engineering related discipline.
- Experience in 2D & 3D CAD packages.
- Experience in the use of Microsoft Office.
