

QUALITY ENGINEER

JOB REF: 0576

Our client is a well-known global provider of heavy engineering solutions who is widely known for the quality and performance of the products they supply. Due to continued growth, they are seeking to appoint a Quality Engineer for their facility in Co Tyrone. This is an excellent opportunity for a quality professional to become part of an expanding global organisation.

Job Purpose

The Quality Engineer will have responsibility for improving customer satisfaction across the product range. They will have responsibility for assuring products meet quality criteria while liaising with production to continuously improve quality standards within the factory.

Responsibilities:

- Continuing to develop and improve Quality Standards throughout the production process
- Implementing the highest standards of quality possible through the production team
- Have the ability to use statistical methods to fault find & support solutions to technical issues.
- Be responsible for assuring bought in products meet quality specific sign-off criteria.
- Where non-conformance exists, use initiative to introduce suitable manufacturing containment actions while working to achieve long-term solutions for quality from root-cause analysis.
- Support day to day operations to ensure there is minimum impact to production as a result of quality related issues and attend regular meetings giving details of quality trends and actions.
- Complete all necessary paperwork to document quality issues and corrective actions
- Maintain ISO accreditation
- Support NPD within the factory from design review stage through to prototype build. Be actively involved in every stage of the process to help guarantee its success.
- Work collaboratively with all people within the facility
- Establish a quality culture

Person Specification

- Educated to minimum HNC/HND level in a Quality, Engineering or Manufacturing discipline.
- A proven track record of experience working in a manufacturing environment covering both fabrication and assembly disciplines.
- Knowledge of manufacturing processes, quality control and problem-solving techniques utilized throughout the manufacturing industry.
- Experience of supplier management principles.
- Previous experience within the quality remit including knowledge/experience of ISO.
- Excellent communication and assertiveness skills for use with internal and external suppliers.
- Excellent computer skills and have a working knowledge of Microsoft Office applications including document and spreadsheet preparation and maintenance.
- Electrical experience would be an advantage.

Benefits:

- The successful candidate will be offered an attractive salary plus a range of benefits
